Actualizar un libro con PUT para que valga 10 centavos la vecindad:

The image shows a development environment with VS Code and MongoDB Compass. In VS Code, a REST client request is configured to PUT a JSON object to `http://localhost:3000/modificar/69e9b75abb1274d82c3b5dbd`. The JSON body is `{ "precio": 0.10 }`. The response status is 200 OK. Below the REST client, a terminal window shows the command `node .\server.js` running, with a warning from Mongoose about deprecated options.

MongoDB Compass shows the `libros` collection in the `libros-api` database. The collection contains two documents. The first document has a price of 300, and the second document has a price of 0.1, which is highlighted in red. A notification at the bottom of the screen indicates that MongoDB Compass is ready to update to version 1.49.0.
